

ST. BERNARD COAL COMPANY

Miners and Shippers of **COAL AND COKE.**
General Office, Earlington, Ky.

A. M. CARROLL, Manager,
337 Union Street, Nashville, Tenn.

S. H. NEWBOLD, Manager,
344 W. Main Street, Louisville, Ky.

R. G. ROUSE, Manager,
Palmer House, Broadway, Paducah, Ky.

CAFT, T. L. LEE, Manager,
Cor. Main and Austin Streets, Memphis, Tenn.

A. S. FORD, Manager,
327 Upper Second St., Evansville, Ind.

Wholesale Agents, HESSER & WICKHAM, Houser Building, St. Louis, Mo. J. W. BRIDGMAN, 603 Teutonic Building, Chicago, Ill.

Keep a Sharp Lookout for Fresh Items of Interest to the Retail **COAL** and **COKE** TRADE, which will appear from time to time, permanently occupying this space.
St. Bernard Coal Company.

PITHY PARAGRAPHS.

The development of coal in the Livermore Valley, Cal., is expected to put coal into Oakland at \$1.50 per ton.

At a convention of Indiana miners, a wage scale committee was appointed and instructed to report a scale for the year beginning May 8, at the convention to be held in April.

At Mexico, Mo., an effort was made to cut the rate of wages from 75 cents per ton to 50 cents per ton. The men struck and after some idleness, work was resumed at the old rate.

A Louisville, Ky., paper suggests that the Government would do well to go into the coal business. It seems to us that the less paternalism there is in the Government the better it will be for the country.

The Tennessee Coal, Iron & R.R. Co., is opening a new coal mine at Homburg, Ala. This, together with the new mines at Henryville, indicates an improved demand for coal.

The miners in the Springfield, Ill., district have been notified of cut to 33 cents.

A 6-foot seam of coal is reported found within the city limits of Des Moines, Iowa.

A price of 90 cents per ton for coal at the mine is said to be the basis under the Ohio coal combine.

Men in Ohio idle for four months find that there is work for them because of the introduction of machinery.

A stock company has organized at Sebeke, Ky., to develop the coal mines near that place.

The coal cars seem to grow larger each year and now some of them are nearly as deep as a box car would be with the same load. It is said that a few years since a ton was a carload; then a 10-ton car, followed by a 20-ton car, and when 30 tons were reached they thought it necessary to place three trucks under it. The cars are now so large that they are the rule and it will not be surprising to soon see 40-ton cars in use. Engines have been made to haul the cars and now haul just as many cars as they used to haul 10 tons made a carload.

DEATH OF JOHN MORGAN.

A GREENVILLE GIVES HIS VERSION OF THE AFFAIR.

The Confederates Were Surrounded While Sleeping.

Mr. P. W. Horn, writing from Greenville, Tenn., to the St. Louis Republic, tells the story of the tragic death of Gen. John H. Morgan, the famous Confederate cavalryman, in the following words:

This good old town is full of historic interest in many respects, but perhaps no spot within it is more interesting to the student of history than the old Williams property, where Gen. John Morgan was killed. Everybody has read, both in prose and in poetry, of "Morgan, Morgan, rider and Morgan's terrible ride," but few people know that Morgan was eventually killed at Greenville, Tenn., but very few people know the real circumstances that attended the killing. Each side has given its own version of the matter, and, as a result, many conflicting stories have been told. After investigating the matter carefully and impartially, and talking with numerous eye-witnesses of the affair, I am fully persuaded that the true story of this important episode in our own war history lies as usual, about half way between the extreme claims made by the opposing parties.

The old Williams property is a large three-story brick building that stands now upon the central main part of the town. It consists of a spacious main building, to which a long is added on the right, and in front of the greater portion of it there is a long porch, with tall brick columns supporting the upper portion of it. Even in its present condition it remains in a rare and fine example of the old fashioned Southern country home. Formerly it was surrounded by a large vineyard and orchard, and had extensive grounds laid off with flower beds and tall rows of ornamental shrubbery and artistic driveways and fountains. I had the pleasure of seeing a faded old time daguerotype of the place in the palmist days, and judging from that, the place must have been indeed a lover of lovers. At present things are very much changed. The house has passed out of the hands of its former owners, and is now being used as a place for the manufacture of plug and tall several of its numerous windows have been nailed up with plank, so that it stands there like a great blind, eyes staring out. Where the vineyard and orchard used to be there is now a block of compactly built, burning houses that from the other way, turning their backs squarely in front of the old mansion, as if only too willing to act the part of the mocking, insulting Philistines. Scarcely a dozen yards on the left of the old house there is now an elegant little residence, built in the latest, most modern style imaginable. A more striking illustration of the new South reaching back to the old, I think if either building gives anything by its nearness to the other.

The old looks antiquated and out of date when contrasted with the new. The new looks irreverent, gaudy and the trill of the date when compared with the old.

During the war a Williams property was occupied by Mrs. Alexander Williams, a widow, and one of the wealthiest ladies in that part of the country. One of her sons—Joseph—was in the Union army, but Tom and William were both captains in the Confederate service. The former was captain of Company E of the Sixteenth Tennessee battalion, while the latter served as Major. The wife of Gen. Morgan, who was the daughter of ex-Congressman Ready, of Massachusetts, was a cousin of the Williams family, and consequently Morgan himself always regarded them as his folks and always managed to stop with them if it was in their part of the country. On Friday, September 8, 1864, he came down the country with a detachment of about 400 men and struck camp at Mt. Bethel church, not quite a mile from Greenville. About 9 o'clock that afternoon, attended by Capt. William Williams and a small guard he rode into town and asked Mrs. Williams if he might spend the night at her house.

"Of course, Gen. Morgan," she replied, "you know that I would be glad to have you and your men stay here, but I have the feeling that tonight is full of danger and other Federal henchmen, and I wish very much you'd stay closer to your men. You afraid you'll get into trouble here."

Morgan heeded at the idea of danger, and said he had seen too many tight places to be afraid of a few hundred men. Mrs. Williams protested so against his stopping there that her son felt obliged to remonstrate with her.

"Mother," he exclaimed, "you are so sure that you are hardly respectful to the General. You must remember that he is a desperate fighter, and a man fully able to take care of himself. He has some Federal henchmen, and I wish very much you'd stay closer to your men. You afraid you'll get into trouble here."

"I see him! There he goes! There he goes!" he shouted, pointing his finger toward him. Two Federal soldiers were seen running up outside the fence in a direction parallel to the one Morgan was in. "Bang bang!" went their pistols, and they fell at the feet of the chivalrous and Morgan fell forward on his face.

The two soldiers then kicked several pieces of the fence and carried the helpless body out through the opening thus made. By this time other soldiers had come up and a scene of tumultuous rejoicing was begun. The yet bleeding body was thrown across a horse and tied there—some say before the breast had left it—and then the soldiers catching hold of the bridle led him up and down through the streets of the town. It was still raining and the streets were muddy. Spill! splash! went the horse's hoofs in the mud and water, and the long snub of the dead man were splattered and bedraggled in them.

"Here's your 4—4 horse thief!" yelled someone, and then the crowd took up the cry. Morgan's guard had been driven off at the first onslaught, and the Union men made no attempt to follow. They had come after Morgan himself, they had gotten him; and now they were satisfied. Morgan's detachment of 400 at Bethel church soon learned that their leader was dead and the force against them was an overwhelmingly large one. On learning this they became demoralized and scattered pell-mell without making any attempt at resistance. Morgan's body was paraded through the streets for an hour or two and was finally left on the depot platform. Later on Gen. Gilliam had taken back to Mrs. Williams, with the understanding that she was to take care of him as she had taken care of him in life, she might now have the privilege of taking care of him in death. When he was buried it was in Capt. Tom Williams's clothes.

It has long been a disputed question whether or not Gen. Morgan was a Southern sympathizer. Some Southern sympathizers claimed that his killing was the brutal murder of a defenseless prisoner of war after he had thrown up his hands and surrendered, while Northern historians have asserted that it was a fair and square death on the field of battle, and that he was standing in one corner of the ground at the time and saw the whole occurrence at a distance of not more than twenty yards from him. Tom is a faithful student of the old-time newspaper serving man. He is honest and industrious, a property owner and a man held by those who know him to be of unimpeachable veracity. I asked him to tell me all about the killing and he related the events just as I had heard them told by other people who knew, and just as I have given them here.

Tom said "I wish you one special question I want to ask you. Had Gen. Morgan surrendered when he was killed?" "Had he thrown up his hands?" "No, sir."

EDUCATION OF THE FARMER.

To my mind this subject stands conspicuous above and beyond all other questions that concern the property and happiness of all those who engage in agricultural pursuits. The farmer's education should be such as to fit him for the most exacting station in life, because his pursuit is the most essential and should be regarded as the most honorable. The farmer should be fitted to judge knowledge from every source that will aid him in comprehending nature's laws as exhibited in the intricacies of plant and animal life and upon a knowledge of which his success must largely depend. The highest object of education is to teach men to study by every citizen and it is his inherent right, yet no other class of our people is so diversified in its interests and so comprehensive in its relations, as the farmer. Greater in number than any other class or even all other classes combined, yet the farmer is subject to have which totally ignore his relation as a factor in society. The farmer may work incessantly from year to year while others control and fix the price of his labor and the product of his toil.

But the question here arises. How can this be accomplished? By placing a high value in every township, where every citizen pertaining to agriculture shall be taught by competent instructors, thereby inculcating and disseminating the knowledge obtained by scientific investigation, and introducing the latest and most approved methods employed in every department of agricultural pursuits. There the farmer's sons and daughters can acquire a suitable literary and scientific education within their reach and under the guidance and protection of the influence of their parents. It may be asked, Why not the boys and girls to colleges and literary institutions instead of bringing the institutions to them? I answer, when farmers' sons and daughters receive their education away from home they are sent to the farm which is their inheritance and pursue in which their education and energy are most needed is likely to be lost in the more exciting life of the city.

In addition to the establishment of high schools, every township should be organized into a Farmers' Union, composed of every citizen engaged in agriculture, and whose domestic stands within the township limits. In these Unions should be conducted the influence and stimulation of the Farmers of Husbandry, the Farmers' Alliance, and all other farmers' organizations now in operation, bringing them and settling their accumulations of wisdom and experience for the common good. The building provided for the high school should be used as a place to hold the Union can discuss all questions of practical interest pertaining to agricultural pursuits. At these meetings, practical knowledge should be disseminated, the results of chemical analysis of the soil, its wants and necessities, should be explained, and the best methods of supplying the

lacking properties necessary to promote the successful growth and cultivation of the various crops should be set forth in plain terms. This work should embrace all the discoveries of science that will aid the farmer in solving the vast questions and intricate problems that are continually arising to impede his progress. He will then be saved the costly expense of the thousands of blind experiments he has been forced to perform. In a vain endeavor to discover, with the light he possessed, the cause of a long succession of failures to reach profitable and satisfactory results.

AMERICAN MAGAZINE OF CIVICS.

THE CARE OF ANIMALS.

"I cannot superfluous," said an intelligent subscriber, "because I must interest their care to disinterested persons, and I am too fond of my horse to let him be neglected. I have had him treated by a number of having them ill-treated or badly handled. I used to go home from the city time and again, only to find myself with my sense of right and humanity to put on my stable suit and go out and work for an hour over a fast team that I owned. They got lame and stiff, and one of them died, and I gave up. I could not afford to employ the kind of men I employed on the farms of my neighbors. I employed the necessity for rubbing the horse dry if he came in wet and muddy, and would stand there and dry off their heated bodies generating steam until the windows were covered with frost. They got lame and stiff, and one of them died, and I gave up. I could not afford to employ the kind of men I employed on the farms of my neighbors. I employed the necessity for rubbing the horse dry if he came in wet and muddy, and would stand there and dry off their heated bodies generating steam until the windows were covered with frost.
